# List configuration

Configure the ranking to have the properties that you desire.
Learn more about the methodology used to compose the individual rankings, to compose our combined ranking and to determine our filters.

**Attribution:** We use or have used the lists from seven providers: Alexa, Cisco Umbrella (available free of charge), Majestic (available under a CC BY 3.0 license), Quantcast, Farsight (only for the default list), the Chrome User Experience Report (CrUX) (available under a CC BY-SA 4.0 license), and Cloudflare Radar (available under a CC BY-NC 4.0 license). Tranco is not affiliated with any of these providers.

## Overview of list properties

### Chrome User Experience Report (CrUX)

- Based on Chrome browser traffic data from opt-in users
- Only contains websites
- Contains subdomains
- Only updates once a month
- Only provides bucketed ranks
- Considered the most accurate ranking by Ruth et al.

### Majestic

- Based on links back to a domain
- Only contains websites
- Updated daily
- Very stable list, sites may remain ranked even if popularity fades

### Cloudflare Radar

- Based on DNS traffic to the 1.1.1.1 resolver
- Contains websites and infrastructural domains
- Only updated once a week (except top 100)
- Only provides bucketed ranks (except top 100)

### Cisco Umbrella

- Based on DNS traffic to Cisco Umbrella/OpenDNS resolvers
- Contains websites and infrastructural domains
- Updated daily
- Volatile list
- Contains domains not visited through a browser or invalid
- Contains subdomains

### Quantcast

- Based on page visits reported by a tracking script and on ISP traffic
- United States traffic only
- Very stable list, due to infrequent updates of estimates
- Some domains are hidden
- Domains may have an equal rank
- Unavailable since April 1, 2020

### Farsight

- Based on passive DNS traffic
- Available since May 1, 2022

### Alexa

- Based on page visits reported by a user panel and on a tracking script
- Very volatile list
- Unavailable since August 1, 2023

## Input lists

Lists to use

☑ CrUX ☑ Majestic ☑ Radar ☑ Umbrella ☐ ~~Alexa~~ ☐ ~~Quantcast~~ ☐ ~~Farsight~~

The CrUX and Umbrella lists include subdomains. Unless you enable the pay-level domains filter below, your output list will also contain subdomains; however these may be (disproportionally) lowly ranked, as there is no count towards the global rank from the other lists.

Number of days

30

○ From start date
◉ From end date

Start date

02/04/2026

End date

03/06/2026

Combination method

○ Arithmetic progression/Borda count:
first domain gets N points, second N-1, ..., last 1 point, not present 0 points
◉ Harmonic progression/Dowdall rule:
first domain gets 1 point, second 1/2, ..., last 1/N points, not present 0 points

Only aggregate domains from the list prefixes of length

○ 500 ○ 1K ◉ 10K ○ 100K ○ 1M ○ Full ○ Custom

## Filters

☐ Only include domains if they were present for at least 1 days

☐ Only include domains if they are present in at least
1 list(s)

☐ Only include domains not flagged as dangerous by Google Safe Browsing

☑ Only include pay-level domains (= *without* subdomains)

◉ Do not filter on effective top-level domain/public suffix
○ Only include domains with any of the following effective top-level domains/public suffixes
(comma-separated list)

☐ Only include one domain (the most popular) for a certain organization
This option can reduce the share of very popular services, e.g. Google with its country-specific websites

☐ Only include domains where the subdomain is in
(comma-separated list)
Requires the CrUX or Umbrella list

☐ Only include domains included in the Chrome User Experience Report of January 2026
This list contains origins popular with Chrome users, and may therefore reflect browser traffic across a larger userbase, but is not ranked.
◉ Use the global dataset
○ Use only domains seen in the selected countries
○ Use only domains seen in the selected regions
○ Use only domains seen in the selected subregions

## Output list

Return a list of length

500 1K 10K 100K 1M Full Custom
